PROPOSAL

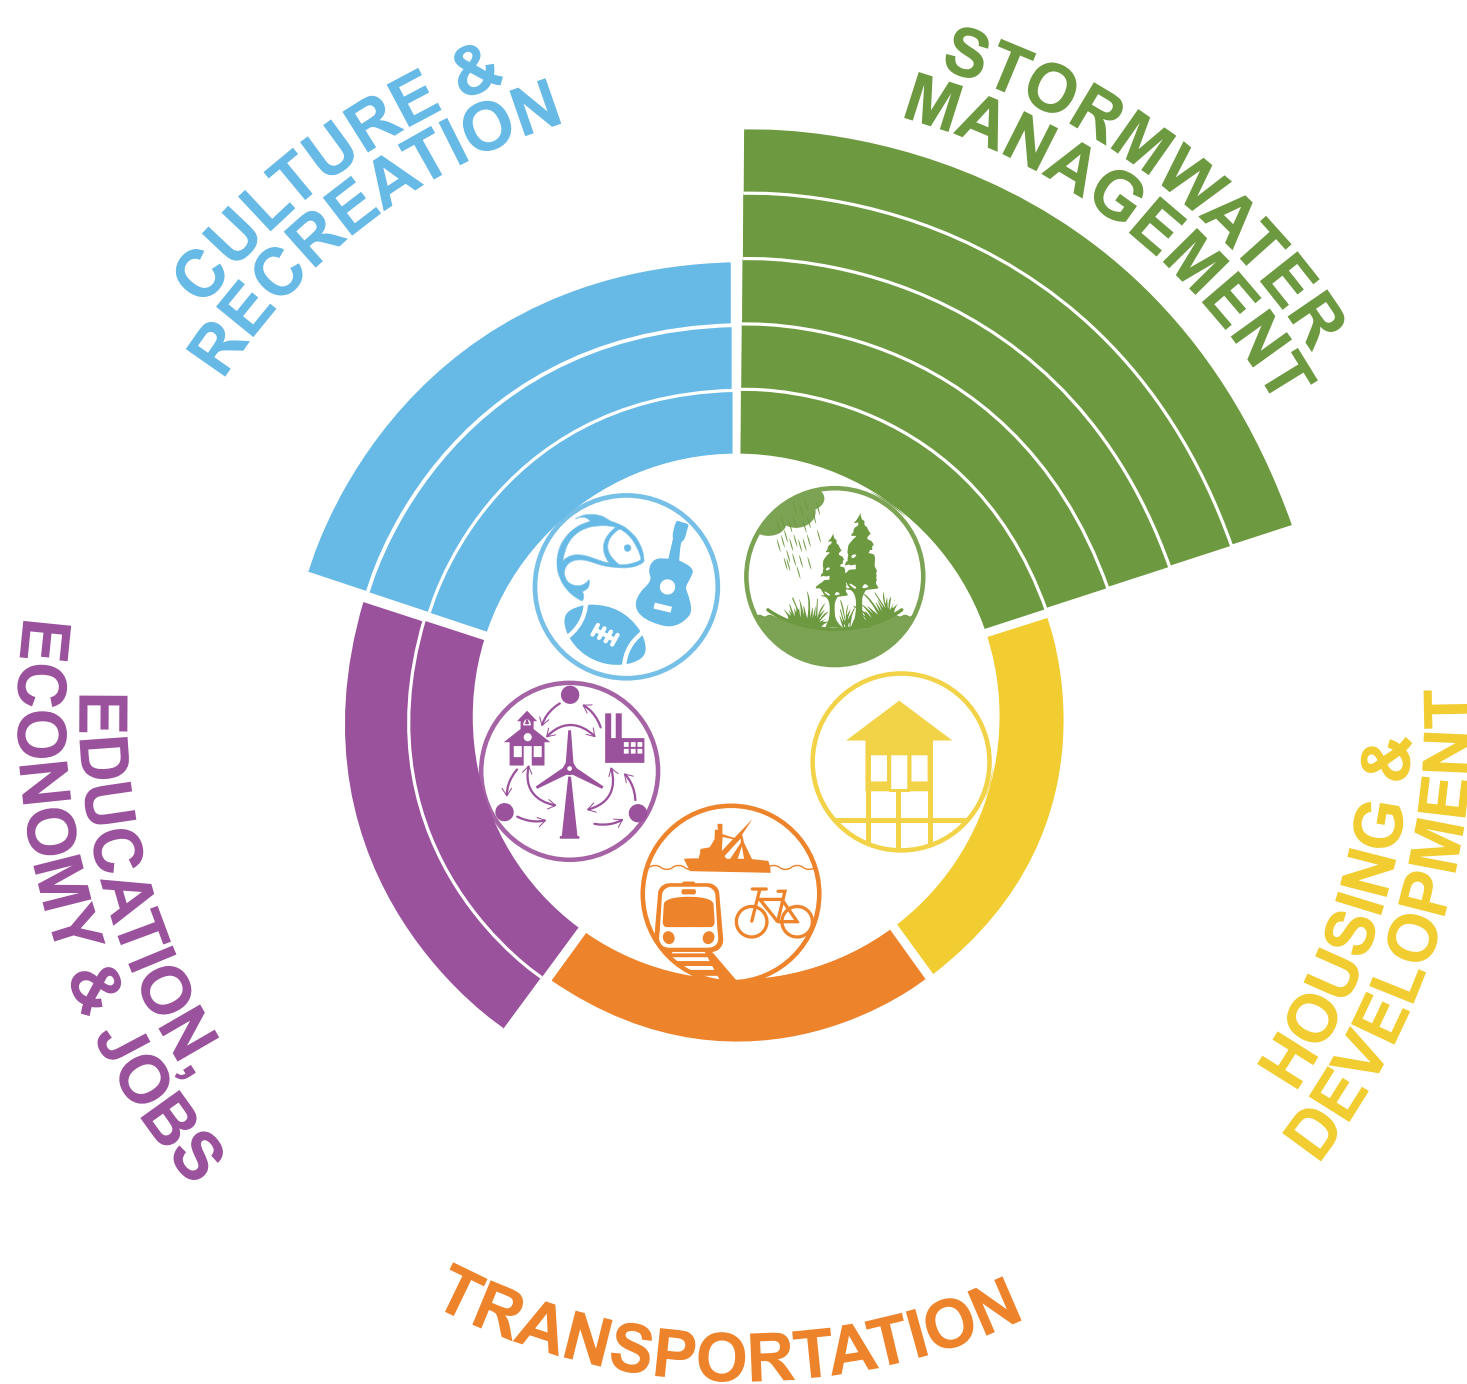

In thinking through a future with increasing flood risk, it will be important to employ what is known as a ‘multiple lines of defense’ approach. The living mitigation terraces create over 300 acres of terraces and marshlands within the Morganza to the Gulf protection system that will assist in reducing the impacts of storm surge for residents and businesses, as well as protecting Terrebonne’s infrastructure. The terraces also have environmental benefits such as enhancing submerged aquatic vegetation growth, restoring habitats, and trapping suspended sediments generated by wind and wave action.

Key Info

Project Area	1235 acres / 300 acres of created marsh
LA SAFE Investment	Approx. \$2 million
Estimated Project Cost	\$10 million
Partners	Terrebonne Levee & Conservation District; Terrebonne Parish; Property Owner; Non-profit grants; industry reps.

Community Benefits

-  The terraces produce marshlands and reduce storm surge, wave fetch, and turbidity. The project also traps suspended sediments generated by wind and wave action.
-  Protects residences and businesses from storm surge.
-  Protects roadways and infrastructure from storm surge.
-  Provides educational example of the value of wetlands and marshlands and habitat diversity.
-  Enhances submerged aquatic vegetation growth, providing resting and nesting habitat for avian life and the American alligator to support birding and tourism industries.
